

YEVHENII STAVYTSKYI

Software Engineer · Product Delivery

Tallinn, Estonia | +372 5835 6589 | stavytskyiyevhenii@gmail.com

Portfolio: stavytskyi.vercel.app | GitHub: github.com/SouCampusV2 | LinkedIn: linkedin.com/in/eugenestavytskyi

PROFILE

Software engineer who builds products end to end and keeps cross-team delivery on track. BSc in IT Systems Development (University of Tartu, 2026). Built and shipped a live marketplace alone — from architecture to production — and, as Head of the Application Unit at proceedit, launched the CMI mobile app from scratch in 6 months while aligning engineering with business, marketing and leadership. Main stack: TypeScript, React, Next.js, Node.js and PostgreSQL; comfortable across web, mobile, integrations and automation, and quick to pick up new tools.

SKILLS

- **Languages:** TypeScript, JavaScript, HTML, CSS, SQL
- **Frontend & mobile:** React, Next.js, Tailwind CSS, Flutter, FlutterFlow
- **Backend & data:** Node.js, REST APIs, GraphQL, Supabase (PostgreSQL), Stripe
- **Tools:** Git, GitHub, Vercel, Figma, Jira, n8n, Claude Code

EXPERIENCE

Founder & Full-Stack Developer — SouCampus Jun 2026 – Present

- Built a live marketplace and custom-build studio as the sole developer — business plan, architecture, front end, back end, database and deployment.
- Shipped catalog with categories, filters, ratings, collections and similar-item suggestions, plus cart, Stripe checkout, instant download and moderated comments.
- Implemented authentication and database-level access control with Supabase (PostgreSQL) row-level security.
- Reached Google PageSpeed 100 (desktop) / 90 (mobile) in production. *Tech:* TypeScript, Next.js, React, Node.js, Tailwind CSS, Supabase, Stripe, Vercel.

Head of Application Unit — proceedit Jan 2025 – Jun 2026

- Led the CMI app (AI-driven market analysis) from scratch to launch in 6 months — live on the App Store and Google Play, ~200 registered users.
- Owned the front end: built Flutter/FlutterFlow screens from Figma designs, integrated REST and GraphQL APIs, and took part in architecture and database decisions.
- Led a team of 10 developers and coordinated ~10 colleagues across business, marketing and leadership; helped shape the in-app credit business model.
- Co-developed the Shopify corporate website; refactored legacy HTML/CSS/JS and restructured content — desktop PageSpeed 70 → 88, page weight cut by 40%.
- Built n8n automations for internal workflows, including the onboarding system from my thesis.

Data Analyst — Sayara International Apr 2023 – Oct 2023

- Collected, validated and visualized media data (YouScan, Excel) to analyze propaganda narratives about the war in Ukraine.

Minecraft Level Designer — Freelance 2019 – Present

- Delivered multiplayer maps for clients worldwide, including MrBeast and Microsoft; handled briefs, revisions and support in English.

PROJECTS

Crossdesk — privacy-first B2B matching · [live demo](#) Sep 2026 – Present

- Built in a team of three at a hackathon, now in the IGNITER pre-acceleration programme. Built the front end (onboarding, sign-in, problem and directory screens); AI agents on the Claude API negotiate fit between companies.

Onboarding automation in n8n — bachelor's thesis 2026

- Automated hiring and onboarding on Gmail, Google Workspace and Jira with an OpenAI parsing agent — cut HR admin time per candidate from 24 to 2 minutes (−91.6%).

EDUCATION

University of Tartu — Information Technology Systems Development (BSc) Aug 2022 – May 2026
